PROFESSIONAL SUMMARY

Full-stack and AI engineer specializing in production-grade systems across React, Node.js, Express.js, MongoDB, and LLM/RAG pipelines (LangChain, Whisper). Designed, built, and shipped three end-to-end applications spanning backend services, secure API integrations, and OAuth-based authentication. Grounded in data structures, algorithms, and scalable object-oriented architecture; pursuing B.Tech in Computer Science (CGPA: 9.01/10.0).

EDUCATION

Vellore Institute of Technology (VIT) Bhopal

Bachelor of Technology (B.Tech), Computer Science and Engineering

- CGPA: 9.01/10.0

Bhopal, MP

2023 – Expected Sept 2027

City Montessori Inter College

Class XII (Science) & Class X

- Class XII (Science): 95.16% | Class X: 92.16%

Lucknow, UP

2019 – 2022

EXPERIENCE

IEEE Student Chapter Member & Conference Volunteer

VIT Bhopal University

Bhopal, India

Jan 2024 – Present

- Engineered end-to-end logistics workflows for the IEEE CSNT-25 international conference, leading a 15-member team to coordinate operations across 100+ participating teams.
- Served as primary technical liaison between international speakers and attendees, streamlining scheduling and communication pipelines to eliminate execution bottlenecks.
- Recognized with a Certificate of Appreciation for driving operational efficiency and cross-functional team coordination.

PROJECTS

NeuralMeet – AI Video Intelligence Pipeline | *Python, Streamlit, LangChain, OpenAI Whisper, Mistral LLM, ChromaDB, HuggingFace, FFmpeg, FPDF*

- Architected an end-to-end AI pipeline transforming raw video and audio into structured meeting intelligence, automating ingestion, transcription, summarization, and action-item extraction.
 - Designed a resilient audio-processing layer using `yt-dlp` and native FFmpeg subprocess pipelines to extract, resample (16kHz mono), and chunk media, then built a dual speech-to-text system combining local OpenAI Whisper (PyTorch) with the Sarvam AI API under custom rate-limit-aware chunking for Hinglish transcription.
 - Orchestrated LangChain-based LLM chains atop the Mistral API to auto-generate executive summaries, key decisions, and open questions, and engineered a Retrieval-Augmented Generation system (HuggingFace embeddings + ChromaDB) powering real-time conversational Q&A over meeting content.
- Link:** <https://github.com/vikassourc/neuralmeet.git>

EmoCare – Full-Stack Emotional Wellness Platform | *React, Node.js, Express.js, MongoDB, Recharts, Tailwind CSS, Framer Motion, JWT, Google OAuth*

- Architected and shipped a full-stack MERN wellness platform, unifying mood analytics, private journaling, and an AI companion into a single real-time dashboard delivering 24/7 self-guided support.
 - Secured user data with JWT and Google OAuth 2.0 authentication, and engineered interactive Recharts visualizations to surface longitudinal mood trends within a responsive Tailwind CSS and Framer Motion interface.
 - Owned the full build-to-release lifecycle, deploying and maintaining the application in production on Render.

TECHNICAL SKILLS

- **Languages:** C++, Java, Python, JavaScript, SQL, HTML5, CSS3
- **Web & Backend:** React.js, Node.js, Express.js, REST API Design, JWT, OAuth 2.0
- **AI/ML & NLP:** LangChain, Retrieval-Augmented Generation (RAG), OpenAI Whisper, PyTorch, HuggingFace Transformers, LLM Orchestration (Mistral)
- **Databases:** MongoDB, MySQL, ChromaDB (Vector Database)
- **Cloud & Tools:** AWS, Microsoft Azure, Git, GitHub, Postman, Render, Vercel, FFmpeg, Streamlit
- **Core CS & Practices:** Data Structures & Algorithms, Object-Oriented Design, Agile, SDLC, CI/CD

CERTIFICATIONS

- **AWS Technical Essentials** – Amazon Web Services (AWS) Training & Certification (Sep 2025)
- **Microsoft Certified: Azure Data Fundamentals** – Microsoft (Jun 2025)
- **Generative AI using IBM watsonx** – IBM (Jun 2025)
- **Full Stack Web Development** – TechBairn (Apr 2025)
